Emirates NBD	9.1%
Arab Technical Construction	7.1%

Fund Manager's Commentary

After sharp losses in March, UAE equity markets recovered in the month of April as we expected last month. The two main catalysts for the rise up this month were the very good first quarter results which came over expectation in some cases, and the cheap valuation resulted from last month's contraction in equities prices. The two markets responded positively to the first quarter results announcements with DFM lifted up by 7.2% and ADSM went up by 9.5%.

Banks were the biggest contributor to the benchmark return this month with FGB took the lead as the stock price went up by 20% in response to a 67% growth in profits compared to the last year. Real estate took the second place in terms of contribution to the return due only 5% increase in the stock price of Emaar and 14% increase in the stock price of Aldar as the company reported 200% growth in the bottom line compared to same period last year. Etisalat still in the interest of investors as the company continued to perform very well either in its saturated local market or in the other markets where it has operations. The company reported 15.5% growth in net profit compared to the same period last year, and the stock price responded positively by rising 10% up. Arabtec holding was the star of the month either in terms of stock price performance, or in terms of net profit growth, as the company reported 285% growth in 1Q2008 compared to the same period last year which pushed the stock price up by 30% this month.

Your fund gained 9.7% this month outperforming the benchmark by 1.1% thanks to our heavy overweight in Arabtec, Etisalat and Emaar.

Forward looking UAE equity markets are trading at price to earning ratio of 13.5x on 2008 expected earnings, which makes them reasonably valued compared to other GCC markets or emerging markets multiples. We expect 2008 to be another good year for UAE equities underpinned by good corporate earnings growth and cheap valuations.
