Investment Philosophy

Makaseb Emirates Equity Fund (MEEF) aims to achieve long term capital appreciation through investment primarily in shares listed on the UAE stock exchanges. The MEEF portfolio is constructed after careful evaluation of various factors including the liquidity of the stock, company fundamentals, profitability, and overall portfolio risk considerations.

Performance Chart

Overview and Outlook

The UAE stock markets flourished in August as the Dubai Financial Market (DFM) rallied 12.60% largely fuelled by Emaar. The Abu Dhabi Securities Market (ADSM) gained 5.12% during the month. The sharp correction witnessed in the last 7 months in the equity market, brought about by a collapse in sentiment from the capricious retail investment community, has resulted in pushing valuations to historically low levels. After the second quarter results that represented normalized levels, institutional investors became more comfortable with their forecasts and started to invest their cash in the markets. Consequently liquidity is gradually returning to the market, which suggests to us that investor sentiment is gradually improving. The more positive price action seen recently coincides with the end of the summer holiday season in the UAE, and we thus expect volumes to increase going forward.

Your fund managed to gain 10.26% during August underperforming the benchmark by 0.99%. The fund has benefited from deploying its cash at the beginning of the rally. This marginal underperformance was mainly due to heavily underweighting of illiquid banking stocks. However, your fund gained performance in real estate and industrial sectors.

We see the UAE market as reasonably valued, and given our bullish stance on the UAE economy, we expect valuations to move higher going forward. We believe that the market has bottomed out and offers long term potential. In the short term we might see some corrections due to some stocks being overpriced.
