Arab Technical Construction	7.5%
Abu Dhabi Commercial Bank	6.8%

### Fund Manager's Commentary

UAE stock markets were very volatile during the month of August. Using MSCI UAE Domestic Index as benchmark, market volatility as measured by the standard deviation of daily index returns increased from 12.25% in the previous month to 19.23% in August. However volatility was higher in the Dubai Financial Market (22.50%) compared to the Abu Dhabi Securities Market (12.69%) during the month for two reasons. DFM is more liquid than the ADSM and is more open to foreign portfolio investment which sharply declined during August.

Due to unfavorable circumstances in the global markets caused by a slowdown in the mortgage sector and tighter credit facilities in the USA, foreign investors were net sellers in both DFM and ADSM with more focus in the former. Secondly Emaar the DFM market leader announcement of share-land swap cancellation with Dubai Holding, enabled the whole market to recover almost all of the losses occurred from the beginning of the month until one week before the month end. This effect has been spread to ADSM market but with lower pace.

The DFM market ended the period slightly down by 9 bps points, meanwhile the ADSM market slipped by 2.6% basically affected by lackluster performance of banking sector and heavy weight Etisalat.

Your fund ended the month slightly down by 0.49% outperforming the benchmark by 0.92% thanks to our overall underweight in Abu Dhabi banking sector, and almost 25% of the investment portfolio placed in defensive positions has well served the portfolio in such volatile circumstances.

We believe that the credit crisis which has jolted the global financial community will have a minimal effect on the UAE equity markets. As reported by S&P gulf banks in general have limited exposure (less than 1% of total banks assets) to sub prime mortgage- related instruments, we therefore don't expect any significant deterioration on the banks' fundamentals. On the other side UAE and Gulf equity markets in general have low correlation with the international markets. Accordingly UAE stock markets are not only underpinned by solid economic fundamentals but they might be considered as defensive markets for foreign investors.
