Arab Technical Construction	7.2%

### Fund Manager's Commentary

The UAE bourses ended in a mixed note in the month of May with Dubai Financial Market lost 1% and Abu Dhabi Securities Exchange gained 1%. The divergence between the two markets indices has widened over the course of this year as ADX gained 10.7% meanwhile DFM lost 4.3% as of the end of May. The main reason behind this divergence is that the DFM market is more correlated to the global markets because of the high foreign investors' presence in the market relative to Abu Dhabi market; hence their exit in the first quarter of this year in the face of global markets turmoil has negatively impacted the DFM performance.

Trading activity was weaker than the last month in Dubai as the market posted -19.5%, and -1% in trading value and trading volume respectively, meanwhile the case was completely different in Abu Dhabi, as the market showed 38%, and 75% increase in the value and volume traded over the last month. The reason behind that was increased interest in cement, food companies in Abu Dhabi that resulted in huge price increase in some cement companies like RAKCC which ended the month up with 59% gains.

Real estate in Abu Dhabi outperformed the benchmark this month underpinned by Aldar properties which ended the month up by 3.4%; on the other hand telecommunication lagged the benchmark as the heavyweight Etisalat declined by 3.7% this month. Banking sector also showed weak performance basically due to ADCB, and ENBD which went down by 9.3% and 2% respectively.

Your fund lost 1.3% this month underperforming the benchmark by 0.7% mainly because our overweight in Etisalat which attributed the most of the underperformance.

In the second half of this year we expect UAE markets to pick up as valuations multiples remain attractive (13.5x 2008E) when compared to the other markets in the region. We also expected the divergence between the two bourses to shrink over the remaining period of the year which means that Dubai to outperform Abu Dhabi. Our believe in this scenario is because Emaar the heavyweight in Dubai is very undervalued either in absolute or relative terms, the stock is traded on 9.3x 2008E, which make it one of the cheapest real estate stocks in the region.
